	Urgent	Not Urgent
Important	• API retrieving live English Premiere League data • A file to store the games, the lineup, and the scores of a user (bot) • A web-app dashboard to see the scores	• A full fantasy league game • Adding multi-user (bot) competitions • Users (bots) making change between matches
Not Important	• Streamlit • Gemma 4 • Pandas • Requests	• Users to play on past seasons or matches

CS193 Project Proposal

Fantasy football (soccer) games are often based solely on personal preference, and that winning is often only a result of luck. Even if the players' evaluations are taken into account, it is unknown what or which bot has a good prediction and how good they are.

A program where different LLMs predict matches. The results will be shown on a online dashboard.

Tech Stack

Python

Streamlit, Requests, Pandas, Google Gemini API

CSV File

Steps

Set up Git repo and environment

Create rules of the prediction model with points

Test Gemini API Gemma 4

Test api-sports.io API with requests

Basic Streamlit dashboard

Feed game data to Gemma 4 query

Connect database with Gemma 4 response, api-sports.io, and the Streamlit Dashboard
